

## Plug Valve Information

Parker Hannifin's plug valves offer a wide range of media compatibility with internal nitrile seals, one-piece extruded body, and a compact design. The one-piece stem/handle combination is constructed of glass reinforced acetal copolymer. For ease of operation, Parker plug valves feature ¼ turn shut-off. All of our plug valves are 100% leak tested and are certified to be leak free to one SCCM. The temperature range and working pressure is from -40 degrees to 175 degrees Fahrenheit at 250 PSI maximum.
